

About Us

Innovative Information Solutions has been providing best-in-class technology solutions for businesses and organizations since 1989.

As your trusted advisor, we design, deliver and deploy the most cost-effective solutions to solve your technology challenges in the areas of **Application Delivery, Data Security and Business Continuity**.

Application Delivery

Organizations of all sizes rely on the performance of web-based and traditional applications. Innovative provides fast, dependable and secure application delivery solutions that enable our clients to increase business efficiency. We accomplish this by addressing both the data center and network in a comprehensive manner. Our solutions encompass network, server, application and storage environments to provide:

- Increased application availability, accessibility, security and performance
- Optimization of bandwidth and other network resources to reduce costs
- An agile, scalable infrastructure

Data Security

Managing the ever-increasing complexity of security has become a top priority today. Innovative offers a comprehensive portfolio of security solutions and services that deliver up-to-the-minute protection for networks of all sizes from current and emerging threats. We will help you:

- Design a trusted infrastructure that protects against business disruption
- Create the ability to rapidly identify and respond to evolving threats
- Develop a data protection strategy

Business Continuity

Every business should be prepared for potential disruptions in Application Delivery. Innovative has the expertise to design, deliver and implement a Business Continuity solution that meets your specific requirements and will include:

- Evaluation and validation of the current environment
- Determining application level RTO (Recovery Time Objectives)
- Development of a fully redundant business environment
